Objective

3rd-year IT student with hands-on experience in MERN and MEAN stack development, AI model training, and workflow automation using tools like n8n and Make. Skilled in building real-world, scalable web applications and integrating intelligent solutions. Seeking an opportunity to contribute to impactful projects while growing as a full stack developer

Education

- Pursuing B.Tech (Information Technology) from Vidyavardhini's College of Engineering under Mumbai University -- CGPA:6.00
- HSC From SMBC Junior College Under Maharashtra Board in 2024 -- Percentage: 51.83%
- SSC From KTMV High School Under Maharashtra Board in 2021 -- Percentage: 67.00%

Skills Summary

- Proficient in **full stack development** using **MERN** and **MEAN** stacks, including **MongoDB, Express.js, React, Angular, and Node.js** to build scalable web applications.
- Strong foundation in **frontend** and **backend** technologies: **HTML, CSS, JavaScript, TypeScript, REST APIs**, and responsive UI development..
- Experience working with databases including **MongoDB, MySQL, Microsoft SQL Server** including query optimization and database design
- Hands-on experience in **AI/ML basics** using **Python** with **NumPy** and **Pandas**, including **model training, clustering, and AI API integration**.
- Built and **integrated AI-powered features** such as **text generation, fine-tuning workflows**, and **intelligent automation systems**.
- Experience with **browser automation** and **testing** using **Chromium** and **Playwright** for real-world automation tasks.
- **Developed automation workflows** including **content posting, auto-replies, and scheduling** using **APIs, cron jobs**, and third-party integrations..
- Familiar with **cloud platforms** including **Google Cloud Platform** and **Microsoft Azure**, including project setup and **API configuration**.
- **Version control** and **deployment**: Experienced with **Git** and **GitHub**, and **deploying applications** using **Render** and **Vercel**.
- Good understanding of **API development and integration**, including **RESTful services** and third-party **API handling**.

Skills

- **Web Technologies:** HTML, CSS, **JavaScript, TypeScript, Angular, React**, Next.js
- **Programming Languages:** JavaScript, TypeScript, **Python**
- **Backend & APIs:** Node.js, **Express.js**, REST API development, **API integration**
- **Databases (RDBMS & NoSQL):** Microsoft SQL Server, MySQL, **MongoDB**
- **AI / ML & Automation:** Python (NumPy, Pandas), basic machine learning, clustering, **AI API integration, n8n, Make (Integromat), cron jobs**
- **Scripting & Automation:** Playwright, Chromium, **browser automation, workflow automation**
- **Cloud & Deployment:** **Google Cloud Platform**, Microsoft Azure, **Vercel, Render**
- **Tools:** **Visual Studio Code**, Postman, Git, **GitHub**

Soft Skills

- Anticipating potential challenges and planning solution
- Ability to clearly explain technical ideas
- Fast learner with commitment to continuous improvement
- Problem-solving abilities
- Hard-working and Honest towards work

Projects

- **Project:** Quizzify – Quiz Management System
- **Domain:** Quizzify is a **web-based application** designed for the **education domain to manage** and streamline quiz activities in a **college environment**. It enables efficient interaction between teachers and students by digitizing quiz creation, assignment, evaluation, and performance tracking, improving overall academic assessment processes.
- **Environment:** HTML, CSS, **JavaScript, Angular, .NET Web API, SQL Server**
- **Role:** Full Stack Developer
- **Team Size:** 1 (Individual Project)
- **Responsibilities:** Developed a complete **quiz management system** enabling teachers to create, schedule, and assign quizzes based on subjects and semesters. Designed and implemented teacher and student dashboards for managing quizzes, tracking attempts, and monitoring performance. **Built backend APIs using .NET Web API for handling quiz data**, user **authentication**, and result processing. Implemented automated grading functionality for objective-type questions, providing **instant feedback to students**. Integrated database operations using **SQL Server for storing quiz data**, scores, and progress tracking. Focused on building a responsive and user-friendly interface to ensure smooth user experience across the platform.

Projects

- **Project:** SynapSocial
- **Domain:** SynapSocial is an **AI-powered social media management platform** that provides a unified dashboard for managing multiple **social media accounts including LinkedIn, Instagram, YouTube, and Gmail**. The platform **automates content creation, audience engagement, and trend monitoring** using **Large Language Models**, enabling individuals and businesses to manage their **entire social media presence** from a **single interface** without switching between multiple tools.
- **Environment:** React.js, Node.js, **Express.js**, MongoDB Atlas, JWT, OAuth 2.0, OpenRouter API (LLaMA 3.1), **Google Trends API**, Instagram Private API, **YouTube Data API v3**, **Gmail API**, **LinkedIn Share API**, **Vercel**, **Render**, **node-cron**, **Multer**, **bcrypt**, **AES-256**
- **Role:** Full Stack Developer
- **Team Size:** 3
- **Responsibilities:** Designed and **developed** the **complete full-stack architecture** of **SynapSocial from scratch**, including a **React.js single-page application frontend** and a **Node.js REST API backend**. Implemented **OAuth 2.0 integrations** for **LinkedIn, YouTube, and Gmail** enabling secure multi-platform account connectivity. **Built an AI chat interface with smart prompt detection** that **generates platform-specific content** using the **OpenRouter LLM API**. Developed a **server-side cron automation engine** that **autonomously replies to YouTube comments and Gmail emails every one minutes** without user interaction. Integrated **real-time Google Trends data** with a **5-minute cache layer** to **surface live trending topics** and **generate AI-powered content ideas**. **JWT-based authentication**, and a **granular per-platform permission system**. Deployed the application to production on **Vercel and Render** with **zero-downtime CI/CD pipelines** triggered on every **Git push**.
